

# NONSTOP

## Reliable and Versatile Vacuum Cleaning Unit

NonStop is a small and compact vacuum cleaner which is suitable for all vacuum needs; from occasional use to a permanent installation as a central vacuum cleaner. Its simple and reliable design makes it usable for both intermittent and continuous operations. The vacuum pump's robust construction, including a built-in cooling air valve and an overheating protection, ensures a safe and long life to the unit.

NonStop keeps a low noise level thanks to its enclosed muffler, as well as the shock absorbers which are

part of its metallic frame. When it comes to remote control, the standard for this unit is a 24V low-voltage cable.

The large dust container has a volume of 40 litres and comes with a washable polyester filter, which complies with BIA class M and has a surface of 180dm<sup>2</sup>. Such a large surface ensures that the vacuum pump's high airflow and heavy vacuum can be maintained for a long period.

Optional wheels are available to turn the NonStop into a mobile vacuum cleaning unit.
